

**April 2013
London, ON
For immediate release**

Another industry first from STIHL

TS 480i STIHL Cutquik® with an electronically controlled fuel-injection system.

The TS 480i STIHL Cutquik® features a state-of-the-art electronically controlled fuel-injection system that increases the power by 17%, as compared to the STIHL TS 410.

Powerful, lightweight and well-balanced, the STIHL TS 480i is designed for superior handling during the toughest jobs (maximum wheel size is 12"). The STIHL electronic fuel injection system continuously and precisely determines fuel mixture, injection and ignition timing. This technology allows the engine to produce low exhaust emissions and optimal torque throughout the RPM range. It also eliminates the need for a choke, simplifying the starting procedure and reduces fuel consumption.

The standard electronic water control feature allows for easy and efficient water flow adjustment during operation. The X2 air filtration system maintains an incredible 99.96% cleaning efficiency and can be operated without maintenance for up to one year under normal cutting conditions.

About STIHL LIMITED

STIHL LIMITED, headquartered in London, ON, is a subsidiary of ANDREAS STIHL AG & Co. KG. STIHL is the number one selling brand of handheld outdoor power equipment in Canada. STIHL manufactures a full line of powerful, lightweight and versatile handheld outdoor power equipment for homeowners and professional users. STIHL products are only sold through servicing power equipment dealers from coast to coast – not mass merchants. For more information or for the name of the closest STIHL Dealer visit the STIHL web site at www.stihl.ca.
